This is an interactive course in which case-based presentation will be used to review techniques essential to diagnose neuro-ophthalmic conditions and discuss appropriate investigations and practical advice on management. Ten cases spanning basic to complex neuro-ophthalmic cases will be presented. The emphasis on working through the cases from presentation through clinical investigations and ordering appropriate tests. The course will highlight areas in which common clinical mistakes occur and how to avoid them. The course emphasises neuro-ophthalmologic emergencies and conditions that are often difficult to diagnose.
